VOLUME 108

VOLUME ONE HUNDRED AND EIGHT

# ADVANCES IN APPLIED MICROBIOLOGY

Edited by

**GEOFFREY MICHAEL GADD**

*Dundee, Scotland, UK*

**SIMA SARIASLANI**

*Wilmington, Delaware, USA*

**ACADEMIC PRESS**

An imprint of Elsevier

# Contents

<i>Contributors</i>	vii
<b>1. <i>Azotobacters</i> as biofertilizer</b>	<b>1</b>
Hirendra Kumar Das	
1. Biofertilizers are important	2
2. The genus <i>Azotobacter</i>	3
3. <i>Azotobacters</i> can fix atmospheric nitrogen	4
4. <i>Azotobacters</i> produce plant hormones	4
5. <i>Azotobacters</i> can solubilize phosphates	5
6. <i>Azotobacters</i> are capable of suppressing phytopathogens or reduce their deleterious effect	5
7. Use of <i>Azotobacters</i> as biofertilizers dates back to almost a century and two decades	6
8. Methods of application of <i>Azotobacters</i>	7
9. The chromosomes of <i>Azotobacters</i>	7
10. The enzyme that converts nitrogen into ammonia	10
11. Protection of nitrogenase from oxygen in <i>Azotobacters</i>	11
12. DNA gyrase is necessary for nitrogen fixation by <i>Azotobacter vinelandii</i>	12
13. Genes coding for the three polypeptides of the enzyme nitrogenase	12
14. Alternative pathways of nitrogen fixation in <i>Azotobacters</i>	12
15. Genes of the constituents of the molybdenum dependent pathway of nitrogen fixation in <i>A. vinelandii</i>	14
16. Genes of the constituents of the vanadium dependent pathway of nitrogen fixation in <i>A. vinelandii</i>	16
17. Genes of the constituents of the <i>anf</i> pathway of nitrogen fixation in <i>A. vinelandii</i>	17
18. Effect of molybdenum and vanadium ions on transcription of the structural genes of nitrogenases of the three pathways	17
19. The promoters of the operons containing the genes involved in nitrogen fixation in <i>Azotobacters</i>	18
20. Upstream activator binding site	18
21. Expression of the <i>nifLA</i> operon of <i>A. vinelandii</i> is an enigma	18
22. Interaction of NifL and NifA	21
23. Maximizing nitrogen fixation and excretion of ammonia by <i>Azotobacters</i>	23
24. Use of genetically engineered <i>Azotobacters</i> as biofertilizers	30
25. Concluding remarks	34
References	36

<b>2. The role of microorganisms in soy sauce production</b>	<b>45</b>
Desmond K. O'toole	
1. Introduction	47
2. Types and composition of soy sauce	49
3. Aroma and flavor of <i>shoyu</i>	58
4. Soy sauce production	61
5. Effect of water activity on microorganisms	81
6. Yeasts	82
7. Bacteria	86
8. Production and metabolism of amino and organic acids in <i>moromi</i>	87
9. Production and fate of other substances	92
10. Possible role of metal ions in soy sauce production	94
11. Conclusion	102
Acknowledgments	105
References	105
Further reading	113
<b>3. Application of model systems to study adaptive responses of <i>Mycobacterium tuberculosis</i> during infection and disease</b>	<b>115</b>
Bhavna Gowan Gordhan, Julian Peters, and Bavesh Davandra Kana	
1. Introduction	116
2. Definitions	119
3. Models of host derived stresses to study non-replicating <i>M. tuberculosis</i>	120
4. Models to study culturability of <i>M. tuberculosis</i>	130
5. Reemergence of non-replicating <i>M. tuberculosis</i>	132
6. Metabolic changes during non-replicating persistence	138
7. Metabolomics: What have we learnt?	144
8. Adaptive transcriptomic responses in human TB	146
9. The microbiome associated with TB disease	149
10. Conclusion	152
References	153
