

Advances in VIRUS RESEARCH

111

Edited by
Margaret Kielian, Thomas C. Mettenleiter
and Marilyn J. Roossinck

VOLUME ONE HUNDRED AND ELEVEN

ADVANCES IN VIRUS RESEARCH

Edited by

MARGARET KIELIAN

*Albert Einstein College of Medicine,
Bronx, New York, United States*

THOMAS C. METTENLEITER

*Friedrich-Loeffler-Institut,
Federal Research Institute for Animal Health,
Greifswald – Insel Riems, Germany*

MARILYN J. ROOSSINCK

*Department of Plant Pathology and
Environmental Microbiology,
Center for Infectious Disease Dynamics,
Penn State University, University Park,
PA, United States*

ELSEVIER

ACADEMIC PRESS

Contents

<i>Contributors</i>	<i>vii</i>
1. Parainfluenza virus entry at the onset of infection	1
Tara C. Marcink, Matteo Porotto, and Anne Moscona	
1. Introduction to parainfluenza virus infection and entry	2
2. HN's structure and receptor binding	4
3. F: Primed for action in its pre-fusion state	7
4. HN interaction with F and HN's role in the activation of F	8
5. The transient intermediate state of F	11
6. Final stages of fusion and entry	12
7. Fitness requirements of the HN/F fusion complex in human lung	13
8. Inhibitors of entry	14
9. Future directions	19
Acknowledgments	21
References	21
2. Molecular archeology of human viruses	31
Sébastien Calvignac-Spencer, Ariane Düx, Jan F. Gogarten, and Livia V. Patrono	
1. Three decades of aDNA research and more than a century of virology set expectations for archeovirology	33
2. Promises and pitfalls of archeovirology	45
3. Outlook	52
References	52
3. Advancing phage therapy through the lens of virus host-breadth and emergence potential	63
Lisa M. Bono, Stephanie Mao, Rachel E. Done, Kenichi W. Okamoto, Benjamin K. Chan, and Paul E. Turner	
1. Phage biology, and the history and promise of phage therapy	64
2. Phage host-range and development of generalized treatment	73
3. Phages can evolve in response to their environments, potentially altering host breadth	87

4. Conclusion	99
Acknowledgments	101
Appendix	101
References	105
4. Alphavirus RNA replication in vertebrate cells	111
Tero Ahola, Gerald McInerney, and Andres Merits	
1. Introduction	112
2. Viral components of the RNA replication machinery	113
3. Host components of RNA replication machinery	129
4. Architecture, functioning, biogenesis and properties of replication complexes	132
5. Functional interactions between components of alphavirus RNA replication machinery	135
6. Replicase inhibitors	141
7. Conclusions and perspectives	143
Acknowledgments	145
References	145
