

Advances in VIRUS RESEARCH

112

Edited by
Margaret Kielian, Thomas C. Mettenleiter
and Marilyn J. Roossinck

VOLUME ONE HUNDRED AND TWELVE

ADVANCES IN VIRUS RESEARCH

Edited by

MARGARET KIELIAN

*Albert Einstein College of Medicine,
Bronx, New York, United States*

THOMAS C. METTENLEITER

*Friedrich-Loeffler-Institut,
Federal Research Institute for Animal Health,
Greifswald – Insel Riems, Germany*

MARILYN J. ROOSSINCK

*Department of Plant Pathology and
Environmental Microbiology,
Center for Infectious Disease Dynamics,
Penn State University, University Park,
PA, United States*

ELSEVIER

ACADEMIC PRESS

An imprint of Elsevier

Contents

<i>Contributors</i>	<i>vii</i>
1. Reinventing positive-strand RNA virus reverse genetics	1
Brett D. Lindenbach	
1. Introduction	2
2. General principles of positive-strand RNA virus replication	3
3. The origins of positive-strand RNA virus reverse genetics	5
4. Construction and application of functional cDNA clones	6
5. Non-clonal reverse genetic systems	15
6. Novel methods and future directions	17
Acknowledgments	19
References	19
2. The complex biology of human cytomegalovirus latency	31
Felicia Goodrum	
1. Introduction	33
2. Human cytomegalovirus	39
3. Perspective	68
Acknowledgements	69
References	69
3. Control of animal virus replication by RNA adenosine methylation	87
Angus C. Wilson and Ian Mohr	
1. Introduction	88
2. m ⁶ A detected in RNAs from a broad spectrum of viruses	92
3. Impact of m ⁶ A on the maturation, function and fate of viral RNAs	93
4. Impact of m ⁶ A on host responses to infection	96
5. Viral manipulation of the m ⁶ A pathway	98
6. m ⁶ Am and m ¹ A modifications	101
7. Future directions	103
Acknowledgments	106
References	106
